

E-WASTE :  
BAY AREA RECYCLING OPTIONS FOR ANALOG TELEVISIONS  
AND OTHER ELECTRONIC WASTE

Prepared by Media Alliance, Coordinator of the Oakland Digital  
Television Assistance Center

Thanks are due to our funder, the National Telecommunications and  
Information Agency, the Leadership Conference on Civil Rights  
Education Fund, our partner Digital Television Assistance Centers in the  
Bay Area at the Southeast Asian Community Center and Self-Help for  
the Elderly and the invaluable resource list assembled at [stopwaste.org](http://stopwaste.org).

August 27, 2009

For Immediate Release

Contact: Tracy Rosenberg, Media Alliance (510) 684-6853

### **D-TV Help Centers Team Up to Deal With E-Waste:**

*Press Briefing on Monday August 31st at the San Francisco Main Library at 1:30pm*

The digital television transition, completed successfully by the United States on June 12, 2009, is generating a large flow of electronic waste as consumers continue to upgrade their televisions. We all want to recycle responsibly, but how?

Up to 80% of electronic waste like old televisions, telephones and computers is exported to developing countries or US prisons where toxic components are openly burned, soaked in acid baths, or piled into mountains for scrap recovery. Impoverished workers often smash leaded glass tubes, breathe solder fumes and melt down plastics to get at the valuable metals inside.

Let's look at some numbers: 130 million cell phones disposed of annually, 500 million computers, and a D-TV transition that has suddenly rendered 20 years of that most common American appliance, the television, disposable.

The Bay Area D-TV Assistance Centers, working with the NTIA, the FCC and the Leadership Conference on Civil Rights, have helped consumers navigate the converter box program for the past year, saving many televisions from the landfill and keeping Bay Area residents plugged in to news, information and entertainment.

Join us on Monday August 31st at 1:30pm at the San Francisco Main Library for a briefing and information session on responsible ways to dispose of electronic waste and appliances, so American technology upgrades don't become an environmental catastrophe for others.

Consumers need and want this information.

The briefing will feature short presentations from the SF Department of the Environment, community recyclers, The Leadership Conference on Civil Rights and local D-TV Assistance workers. All attendees will receive a resource list of local recycling options that are community-oriented and environmentally responsible.

Tracy Rosenberg, Media Alliance's Executive Director, says, "This briefing is a crucial part of the D-TV transition support services we've been providing for the past year. We didn't want anyone to lose access to information because of the switchover. We don't want people to lose their lives, either. Consumers want to do the right thing, but they need help to identify the best options".

###

## December 2008 to August 2009 Oakland Digital Television Assistance Center Statistics

*Services Provided:* Media Alliance maintained a walk-in and call center in East Oakland from January 26, 2009 to July 15, 2009 to assist low-income working families and the elderly through the digital transition. Services provided included coupon processing and distribution, converter box demonstrations and recommendations, antenna recommendations, referrals for installation services, rescanning and troubleshooting, and complete hookups performed on equipment brought to the center. We also assisted consumers confused by the simultaneous Comcast digital upgrade and consumers who chose to purchase new televisions. In addition we performed off-site information sessions, which included coupon distribution, converter box demonstrations and general information about the distribution at every senior facility in our service area multiple times, a dozen low-income housing projects/SRO hotels and other community organizations on request. Free coupons and/or donated boxes were provided to 67 people who did not qualify for government discount coupons for converter boxes. Services were provided in English, Spanish, Cantonese and Vietnamese. Continuation services after July 15th were provided in Downtown Oakland through the end of August. Identified fraudulent converter box retailers in Oakland's Chinatown neighborhood and helped affected consumers.

*Number of Customers Served Directly to Date: 1,712*

*Number of Institutional Information Sessions: 47*

### *Demographic Data*

*African-American*

*19%*

*Asian American - Vietnamese, Cambodian, Lao, Filipino, Korean, Chinese*

*40%*

*Caucasian*

*17%*

*Latino-Raza*

*24%*

*Walk-ins: 43% / Call Center: 57%*

*Staffers:* Phavia Kujichagulia, Nhan Lee, and K.J.

*Public Awareness and Outreach:* The Oakland Digital Television Assistance Center engaged in the following public awareness activities: regular informational bulletins about the transition to a 10,000 person organizational mailing list, monthly press releases 675-person Northern California regional press list, web articles on the DTV transition and e-waste resources at [www.media-alliance.org](http://www.media-alliance.org), numerous interviews for local print, television and radio outlets, both mainstream and alternative including KTVU/FOX, NBC/KNTV, Univision, KQED/NPR, CBS/KPIX, ABC/KGO, KPFA/94.1FM, KPOO, The San Francisco Chronicle, The Oakland Tribune, The Contra Costa Times, KTSF/26 and many others. 30-minute DTV informational session taped for public access television in San Francisco, Berkeley and Laney College Educational Television in Oakland.

The following information is taken from the  
San Francisco Department of the Environment  
11 Grove Street, San Francisco, CA 94102  
(415) 355-3700 • environment@sfgov.org  
(SFEnvironment is a dept. of the City & County of San Francisco)

*When it comes to protecting the health of our environment and our communities, San Francisco earns its reputation as "the City that Knows How" every day. We've packed our website with information to help all of us make our homes, our city, and our planet a healthier place to live.*

### **Legislation & Initiatives**

SF Environment, the Commission on the Environment, the Board of Supervisors, and the mayor have all helped create ordinances and resolutions to address the problem of solid waste, including setting the goals of 75 percent landfill diversion by 2010 and zero waste by 2020, various policy initiatives to ensure that government leads by example, and efforts to encourage the private sector to move toward zero waste.

### **Citywide**

**Resolution Urging Zero Waste Goal** – Passed by the Commission on the Environment urging the mayor and Board of Supervisors to adopt goals of 75 percent landfill diversion by 2010 and zero waste by 2020.

**Resolution Adopting Zero Waste Goal** – Adopted goals of 75 percent landfill diversion by 2010 and zero waste.

**Resolution Setting Zero Waste Date** – Set the date of 2020 for zero waste goal.

### **Producer Responsibility**

\* Extended Producer Responsibility Resolution – Supports statewide efforts to hold producers responsible for product waste and agencies to include producer responsibility language in city purchasing contracts.

\* Computer and Electronics Recycling Resolution – Advocates state legislation requiring computer and electronic manufacturers to take responsibility for reuse and recycling of their products.

### The e-Waste Crisis

Every year, an estimated 400 million units of obsolete electronics are scrapped. Four billion pounds of electronic waste, or e-waste, was discarded in the United States in 2005, accounting for between 2% and 4% of the municipal solid waste stream. As much as 87.5% of this was incinerated or dumped in landfills. Of the remaining 12.5% collected for “recycling,” industry sources claim that about 80% is exported to developing countries where it is processed in primitive conditions, severely endangering the environment, workers and communities. Pollution created by irresponsible e-waste processing can also come back to haunt those in the exporting countries as well in the form of air pollution fallout via long-range transport.

*"Unlike other countries in the world, the U.S. sends much of its hazardous e-waste to U.S. prisons."*

The world faces an e-waste crisis because of the following factors:

**(1) Huge volumes:** The dual forces of rapid obsolescence of electronic gadgetry combined with astronomically burgeoning use have created mountains of e-waste—the largest growing waste stream our economy produces.

**(2) Toxic design:** Electronic equipment contains some of the most toxic substances known: mercury, lead, cadmium, arsenic, beryllium, and brominated flame-retardants, among others. Thus, when this equipment becomes waste, it is toxic waste. When burned, even worse toxins can be formed such as dioxins and polycyclic aromatic hydrocarbons that can cause cancer and birth defects. Until recently, far too little emphasis has been placed by manufacturers on eliminating toxic materials.

*(For the complete list of all 9 crisis factors go to [www.e-stewards.org](http://www.e-stewards.org))*

## How to Become an e-Steward Enterprise

Fortune 500 companies, universities and school districts, city and state governments, and other large organizations can become an e-Steward Enterprise if they commit to exclusive use of e-Steward recyclers. Approximately every 3 years, large enterprises often replace their entire stock of technology infrastructure, and in addition to the environmental and social harm created by improper disposal, significant data security issues arise if fast-cheap-and-dirty operators take the job. E-Steward recyclers are the best in the business, and we will recognize the leading corporations and other organizations that commit to using only the most progressive and responsible recyclers and asset managers.

If interested in qualifying as an e-Steward, or if your organization would like to become an e-Stewards Enterprise, send an email to **inform@ban.org** with the subject line “e-Steward inquiry, [your company name here].” You will receive additional information and the opportunity to initiate the process. Be advised that there is now a substantial waiting list.

## BAN Films

*"Exporting Harm: The High-Tech Trashing of Asia"* – The new hard-hitting documentary on the dumping of toxic computer wastes to China that continues to open peoples' eyes to the true horror of the high-tech revolution.

*"The Digital Dump: Exporting Re-use and Abuse to Africa"* – The photo-documentary report entitled “The Digital Dump: Exporting Re-use and Abuse to Africa,” exposes the ugly underbelly of what is thought to be an escalating global trade in toxic, obsolete, discarded computers and other e-scrap collected in North America and Europe and sent to developing countries by waste brokers and so-called recyclers.
